I have over 15 years experience in documentary production and worked in various positions from field logistic support, photography, sound recording and now mostly doing cinematography. I am catering production styles for both web/multimedia and standard broadcast. I have solid guiding and expedition background, am used to working in remote areas and certainly an extreme environment specialist from polar to tropical with underwater skills. Programs were essentially natural history (BBC NHU), science, various human documentaries (ABC, SBS), conservation and educational programs. Specific recent camera experience includes remotely controlled cameras, stabilized systems and drones (licensed operator).

Main Productions
